

# AAMI

What protection level do I need?

## Level 4

### Highest Fluid & Microbial Barrier

Protection against blood-borne pathogens in critical zones. Needed for long, fluid-intensive procedure and for operating on patients with blood-borne pathogen risk.

## Level 3

### Moderate Fluid Barrier Protection

Used for the widest range of surgical procedures, where moderate fluid protection is indicated. Arterial blood draw, Inserting and IV, Emergency Room, Trauma

## Level 2

### Minimal to Low Fluid Barrier Protection

For use only for low-fluid, minimally invasive surgical procedures. Blood draw from a vein, Suturing, Intensive care unit, Pathology lab.

## Level 1

### Minimal Fluid Barrier Protection

Basic care, standard hospital medical unit or care facility.

# Polyethylene Isolation Gown

Superior Protection Without Compromising Mobility

Universal

PEG-0BTH-IU

The Paneffort Polyethylene Isolation Gown is made with thumb loops for easy donning. It provides a high level of protection against blood and fluids in demanding environments.
